

# ALICE Run Manager

## ALICE Run Manager (18 Sep - 1 Oct 2023): Cristian Andrei

Cristian Andrei is a physicist from Bucharest NIPNE. He is a specialist of pion, kaon and proton production in high multiplicity pp events, studying the dependency of their production as a function of charged particle multiplicity and event shape. He is actively contributing to PWG-LF PAG, participating to ARC and IRC. Cristian has a strong experience in data taking and operation at P2. Since 2016 he has ensured all central shifter positions: ECS, DCS, QC and SL. He was also an expert operating during heavy-ion run period, and Run Manager in 2018.

Cristian will face an incredible challenge as he will be in charge of the first RUN 3 Heavy Ion data taking. The ion run is scheduled after 10 weeks with very little Stable Beam time (17h) combined with major components being deployed, integrated and validated with COSMICS, SYNTEHTIC and REPLAY data.

To make sure we collect a beautiful heavy ion data sample, Cristian, as all RMs before him, knows he can count on the incredible spirit of all experts of P2.

More details are on the [ALICE Run Coordination website](#).
